Academics

CARDIOVASCULAR PERFUSION

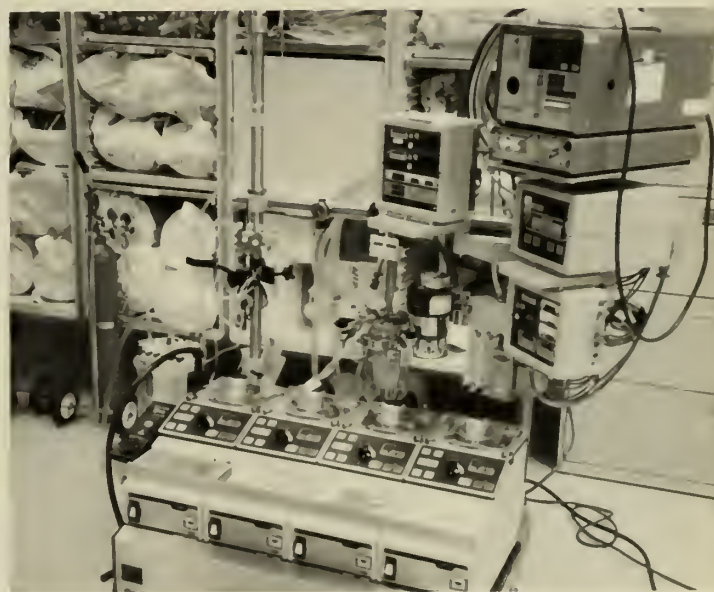

Perfusion technology is the combined application of the knowledge of the cardiopulmonary system and complex technology to the maintenance of life during any medical situation where it is necessary to support or temporarily replace the patient's circulatory or respiratory function. Students will become knowledgeable concerning the variety of equipment available to perform extracorporeal circulation functions and the techniques which will be used throughout their academic and clinical education.

While cardiovascular perfusion is a relatively new occupation, cardiovascular surgery procedures are now universally encountered, increasingly complex and diverse. Although today's perfusionist may be clinically active in many areas, cardiovascular bypass for elective heart surgery remains the primary modality. Familiarization with a patient's medical history and current laboratory results, development of a plan to conduct the perfusion, selection and interpretation of appropriate diagnostic tests, and administration of blood products and pharmacologic agents, as needed, comprise the perfusionist's role.

Robert Stroud *Program Director*

EMERGENCY MEDICAL SERVICES

The Emergency Medical Services (EMS) program provides three educational tiers. The Associate Degree prepares the student to take the Pennsylvania certification examination for the EMT-Paramedic. Clinical education is combined with investigation of specific EMS and health-care management issues as well as a broad base of science and liberal arts courses. The Bachelor's Degree enhances the foundation in EMS and health care provided in the first two years. The emphasis of the baccalaureate program is the intensive internship required. The Master's Degree addresses the needs of individuals with clinical expertise who wish to move into EMS administration.

Jean Will, Program Director

I'm tellin you it's
sinus tack!

Are you choking?

HELP!

H. E. A. R. T.

HEART is the first year of a three-year associate degree program for students whose academic skills need strengthening. Students who successfully complete the preparatory HEART curriculum may proceed to the remaining two years in a prescribed associate degree program, if the student meets the admission requirements of the program. The curriculum introduces students to the health professions; provides courses in English, math, computers and the sciences; provides academic and tutorial assistance throughout the courses; and prepares students for further education as health-care practitioners.

Diana Williams
H.E.A.R.T. Program Director

OCCUPATIONAL & ENVIRONMENTAL HEALTH

This program provides a sound academic foundation which will enable the graduate to function as a practitioner involved with the recognition, evaluation and control of occupational and environmental hazards.

Students will receive a well-balanced program of studies in the physical, chemical, mathematical, biological and social sciences, and the humanities, along with courses specific to environmental and health curricula.

This undergraduate program can be a steppingstone to graduate level or professional school programs.

Dr. Sam Elkin, *Director*

PHYSICAL THERAPIST ASSISTANT

This accredited entry-level educational program has both a full-time and part-time format and is designed to qualify the graduate to take a State Licensure examination and function as a physical therapist assistant (PTA). Although several courses in the curriculum can be applied to other academic degrees, the program intends to prepare entry level PTA clinicians through Associate Degree education. Applicants who are interested in becoming physical therapists are encouraged to apply to physical therapist educational programs.

The PTA is a health-care professional who performs basic physical therapy procedures in accordance with an established plan of care under the supervision of a licensed/registered physical therapist. Career opportunities exist in hospitals, clinics, rehabilitation centers, sports medicine clinics, children's centers and in all those sites where a physical therapist provides supervision as required by the specific State or Commonwealth.

William B. Inverso
Director

HEALTH SCIENCES & SOCIETY

Based on the challenge to prepare students to enter the dynamic setting of the American health-care delivery system, this program has been designed to integrate knowledge of the natural and social sciences with the humanities; and to provide a pre-professional education that will enable students to prepare for a wide range of professional careers including graduate science work, health-care professions, medical school or physical therapy.

The baccalaureate program in Health Sciences and Society has established agreements with Hahnemann University's School of Medicine and the Graduate School's Master's Program in Physical Therapy. Through these agreements, a student who successfully completes the baccalaureate program and who meets the specified criteria of the School of Medicine or the Physical Therapy Program will be automatically accepted.

Grad School, here I come!

What time does class start?

In the spotlight

All I need is a beer.

HUMANITIES AND SOCIAL SCIENCES

For individuals not certain of their career goals yet wishing to be in a health sciences environment, this two-year course of study leading to an Associate Degree in Science or in Arts develops and enhances students' skills in writing and speaking and broadens their backgrounds in a variety of disciplines, including literature, history, philosophy, psychology, mathematics, sociology, and the health-related professions. In addition, for individuals not sufficiently qualified for immediate entrance into the health sciences programs of their choice, this program seeks to prepare these students for acceptance into their desired programs.

Gerald A. Bello, Ph.D.
Program Director

Top The Bellevue
HIL DELPHIA

"Will the real John Goss please step forward?"

LABORATORY SCIENCES (MEDICAL TECHNOLOGY)

The Medical Technology program educates students through a broad background in the chemical and biological sciences to work in the five major areas of the clinical laboratory: blood banking, clinical chemistry, hematology, immunology and clinical microbiology. As a professional member of the health-care team, the medical technologist is able, with the aid of microscopes and sophisticated instrumentation, to examine samples of body fluids for purposes of developing data used by the physician in the maintenance of health and the diagnosis and treatment of diseases.

The program includes two tracks—one associate degree lower division and one bachelor's degree upper division. Hahnemann University is one of only two academic institutions on the East Coast which offers a Medical Technology/cooperative education program.

Pamela Buccelli, Ed.D.
Program Director

Our brownies are low calorie!!

Yes!!!

Is it really for me?

Coffee anyone?

Well, it's like this

Good job, Paul

Well done, Lenore.

This stuff is easy.

Well, what do you think?

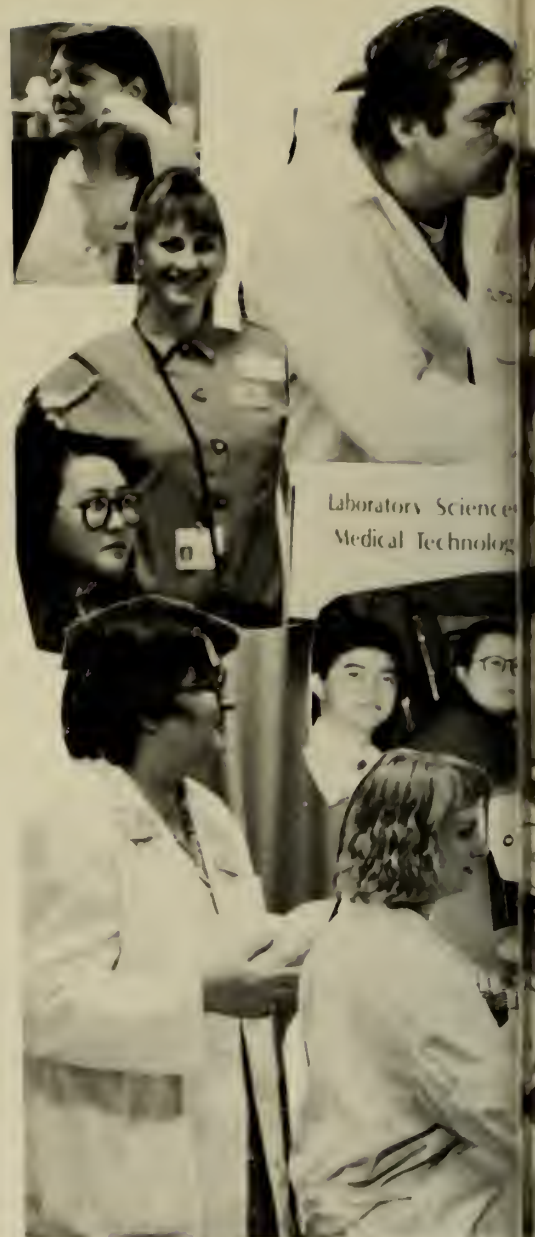

See, it's all right here.

Sophomores make a last minute cram.

Where . . . are your chemistry contracts for me?

A quick lunch, and for free, too.

What *IS* it?

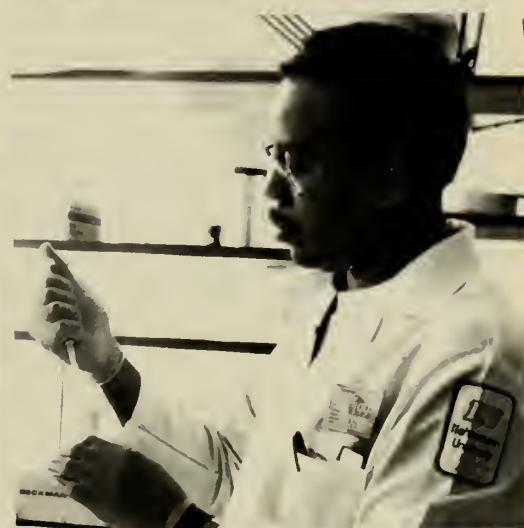

Party time

What the...!!?

We're off to Pittsburgh, Yeah!!!

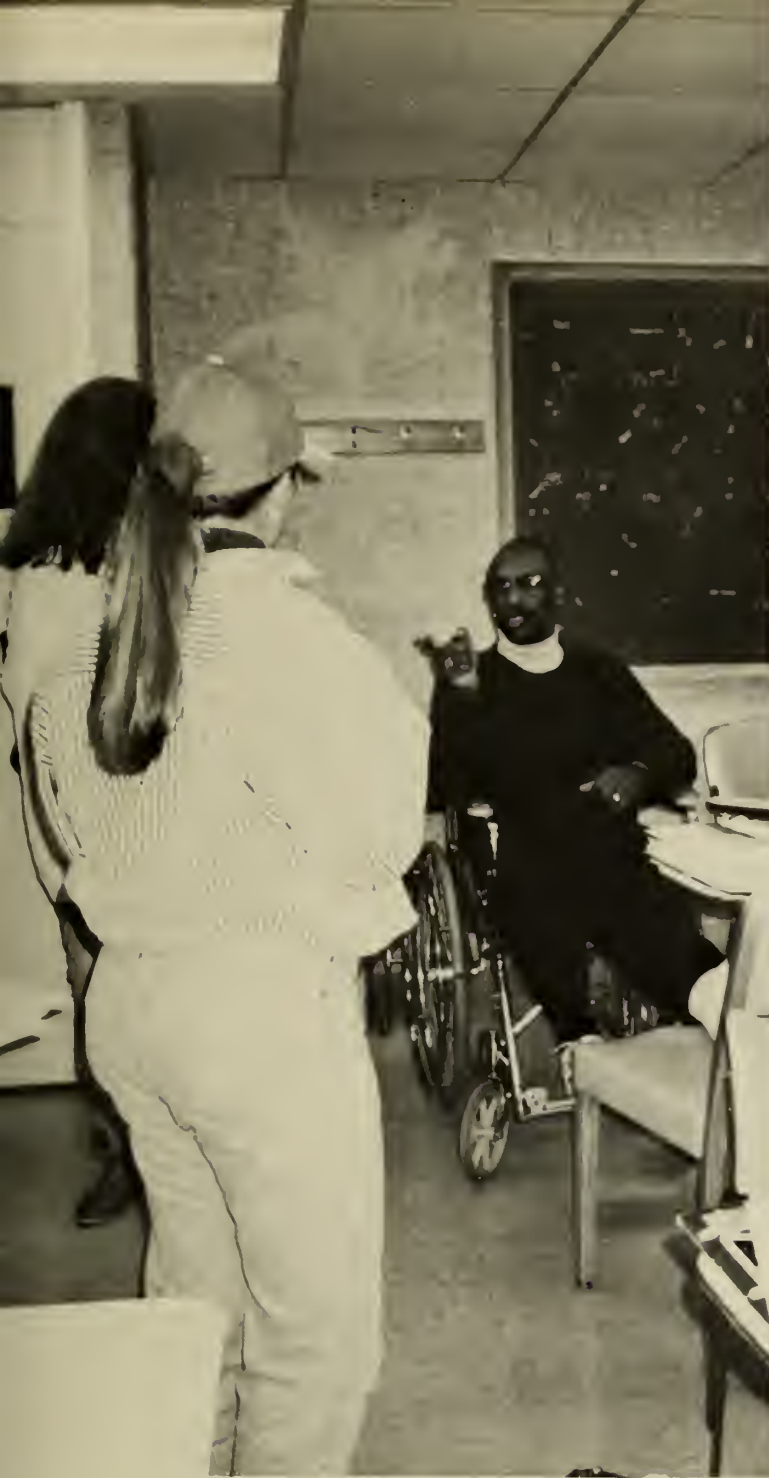

The answers must be here somewhere.

MENTAL HEALTH TECHNOLOGY

The curriculum includes an integration of courses from the humanities, social sciences and clinical mental health practice areas. Heavy emphasis is placed on psychology and sociology. Mental health oriented courses which encompass the philosophy and practice of community mental health, human development, methods of interviewing and therapeutic intervention techniques make up the majority of the career-oriented course work. During the second year, students have clinical practice placements three days weekly in various mental health and human service agencies in Philadelphia and the surrounding areas. These experiences bring students into direct contact with patients, their families and the community at large. Related courses are also given in the second year.

NURSING

ASSOCIATE DEGREE

Hahnemann's fully accredited Associate Degree in Nursing Program is a two-year academically rigorous program. The curriculum combines nursing courses with courses in the natural and social sciences and liberal arts. At the end of two successfully completed years, the graduate is prepared to take the National Council Licensure Examination (NCLEX) for licensing as a Registered Nurse. The program is approved by the Pennsylvania State Board of Nursing and accredited by the National League for Nursing.

BACCALAUREATE (B.S.) DEGREE

This unique R.N. completion program offered by the Department of Nursing Education is specifically designed for the Registered Nurse who wishes to earn a degree on a full- or part-time basis. Baccalaureate-prepared nurses are in high demand and are professional practitioners who assume leadership roles in the practice of nursing.

Ouch! I stuck myself.

I can't find my paper.

Back Off!

Psst! What is No 19?

Rain, sleet, or snow I'll be there.

I think I got it!

Let me tell you something else.

I wear my sunglasses at night.

I'm Shocked at you!

Peek-A-Boo

You go girl!

AHHH!

By George I think I've got it!

Where did that stud come from?

Who's that Phat Daddy?

I think I like peds best.

Finals are coming.

I think I'm going to fall, take it!

FLASHBACK

PHYSICIAN ASSISTANT

The physician assistant (P.A.) is a primary health-care provider who works in association with and under the supervision of a physician. The concept of the physician assistant has developed from the basic premise that many tasks performed by physicians can be carried out with equal competence by other specially trained health professionals.

The Hahnemann physician assistant is educated to deliver patient care in a wide variety of practice settings under the supervision of a licensed physician who is responsible and legally liable for the performance of the assistant. Graduate P.A.s diagnose, treat and monitor a large variety of commonly encountered illnesses and injuries in concert with their supervising physicians. Patient education, preventive intervention, complete or directed history and physical examinations, test evaluation and presentations of cases in a problem oriented fashion to the supervising physician are only some of the duties of the physician assistant. He or she also performs technical skills such as ECGs, venipuncture, suturing, casting and injections.

SHERRY STOLBERG,
PROGRAM DIRECTOR

RADIOLOGIC TECHNOLOGY

The program prepares students to perform actual diagnostic X-ray examinations vital to the diagnosis and treatment of patients. Education of the radiographer is accomplished through an integrated plan of classroom and closely supervised clinical practicum. Students have clinical experiences in CT, Magnetic Resonance Imaging, Angiography, Radiation Therapy, and Nuclear Medicine. Graduates are familiar with all areas of diagnostic radiologic technology and the most modern, sophisticated equipment.

Upon successful completion of the program requirements, the graduate is eligible to take the certification examination offered by the American Registry of Radiologic Technologists.

Dorothy Gray, Program Director

Elvis, Is ALIVE!

Leave me alone!

Are the residents done yet?

Bad Hair Day.

We can't x-ray you without a referral.

We love it here.

I'll bring in your money tomorrow.

Mark & Pete with thoughts for the class picnic.

PHOENIX'S CUTTING EDGE OF ROCK

Actor, 23, dies

Phoenix collapses at club

By GERARD EVANS
and CORKY SIEMASZKO

The brief life of actor River Phoenix ran dry when he collapsed and died mysteriously early yesterday outside a Sunset Boulevard nightclub where he'd attended a Halloween party.

Phoenix's friends reported he had been "acting strangely" just before he fell to the ground, said Bill Martin, a spokesman for the Los Angeles County Sheriff's Department.

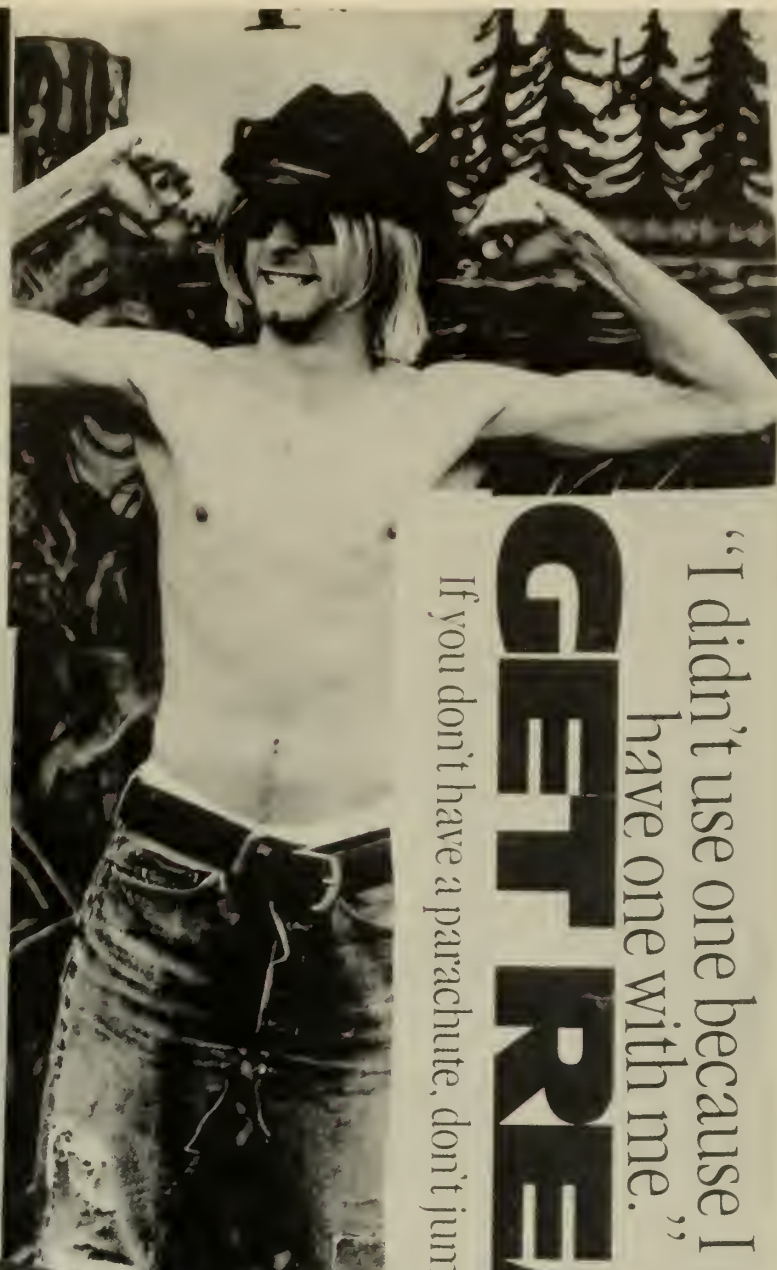

The cause of death was not known and an autopsy was expected to be conducted today.

The 23-year-old star of "My Own Private Idaho" crumpled to the pavement outside a West Hollywood nightclub called The Viper Room, owned by actor Johnny Depp.

A paramedic, Capt. Ray Ribar of the Los Angeles County Fire Department, said he pumped Phoenix's heart for 15 minutes and could not get a pulse.

He was rushed to Cedars Sinai Medical Center, where surgeons worked 40 minutes more in a vain effort to revive him and even make him to stimulate him.

Phoenix was pronounced dead at 1:51 a.m. and the Los Angeles County Sheriff's Department is investigating the death.

"I didn't use one because I didn't have one with me."

If you don't have a parachute, don't jump, genius.

GET REAL

Like James Dean, many of the entertainment world's most promising stars were too fast to live, too young to die.

River Phoenix yesterday became the latest casualty in a long line of rising young stars cut down by tragedy before reaching their zenith.

Here are a few of the most famous cases of stars who died young.

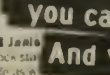

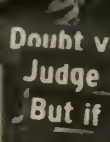

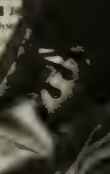

■ **John Marley**: The death of Hollywood's onetime "Babe" Bernstein from cardiac problems at age 26 in 1977 shocked the world and cast a shadow over the careers of Marley, Marlon and Jodie Foster.

spanned

■ **Jim Morrison**: The poet laureate of rock 'n' roll, the 27-year-old singer of The Doors died of a heart attack at age 27 in 1971.

■ **Janis Joplin**: The bluesy rock star died of a heart attack at age 29 in 1970.

Helm reduce the risk.

Don't doubt yourself and you doubt everything you see.

Judge yourself and you see judges everywhere.

But if you listen to the sound of your own voice, you can rise above doubt and judgement.

And you can see forever.
